

By fusing gamification and individualized learning, Duolingo has completely changed the way people learn languages and made language instruction interesting and accessible to users all over the world. With the help of its endearing owl mascot, Duo, and its astute use of notifications to sustain user streaks, Duolingo has effectively developed a platform that encourages and motivates users to stick with it in addition to teaching. Beneath its lighthearted surface, though, is a more serious problem: although Duolingo is excellent at teaching grammar and vocabulary, it frequently fails to adequately prepare users for language use in everyday situations. Practical applications that are essential for developing confidence and fluency in real-life situations, like professional interactions, cultural nuances, and pronunciation, are difficult for many students to master. The goal of this capstone project is to close these gaps by investigating creative ways to improve Duolingo's ability to get users ready for language exchanges in the real world. We offer focused solutions to enhance user retention, satisfaction, and overall learning results by examining user pain points, such as the absence of actionable feedback, a lack of professional and cultural context, and ineffective review procedures. We want to make Duolingo a more complete tool that not only teaches languages but also gives users the confidence to use their skills in a variety of real-world contexts. To achieve this, we plan to implement community-based learning, cultural and professional mastery hubs, quick refresher modules, and sophisticated pronunciation feedback systems
